Micro fiber leather is the abbreviation of microfiber PU synthetic leather-is a non-woven fabric of microfiber staple fiber made into three-dimensional structure network through combing needle, and then through wet process PU tree ester containing immersion.alkali reduction, skin dyeing and finishing process.and finally made into microfiber leather.Is in the PU polyurethane added microfiber, make the toughness and air permeability, wear-resistance has been further strengthened, is a new development of high-grade leather, belongs to a new type of leather material, Has become the most ideal choice to replace the natural leather, Microfiber is mainly divided into two categories: PU microfiber and microfiber suede. Its thickness,color, surface effect and physical properties can be customized

Physical properties: super cold resistance, acid resistance, hydrolysis resistance, light weight, breathable aging resistance.Tear resistant, wear resistant, tensile strength.

Chemical properties : does not contain heavy metals. azo AZO and other harmful substances to human body It is a safe and environmentally friendly green product.

Application fields of microfiber leather

Microfiber because of its easy to cut, high utilization rate, easy to clean, environmental protection no odor. etc, it is widely used in shoes, bags, gloves, sofa furniture, car accessories, clothing, packaging, sporting goods, electronic and digital industry.

CIGNO

Founded in 2007, Cigno leather is a professional manufacture specialized in highly-quality faux leather in Dongguan China, our main products include Vegan leather, recycled leather, PVC leather and microfiber leather use for furniture, automotive, cloth, handbags and shoes.

“ Why choose us ? ”

PU microfiber Leather

PU Microfiberleather is made on the basis of microfiber. coated with PU coating. The PU coating process canmake a lot of diferentpat-terns,colors and surface effects.

The advantages of PU microfber are chemical resistance, wrinkle resistance, wear resistance,processing adaptabilitand quality are out-standing

. The folding fastness can be compared with natural leather, Normal temperature bending reached200,000 times without crack low temperature bending 30,000 times without crack.

2.with a moderate elongation ratio.

3,with higher tear strength and dissection strength.

4, non-toxic, environmental protection, tasteless! From production to use will not have any pollution.environmental protectioi performance is superior.

5resistant to hydrolvsis and sweat stains

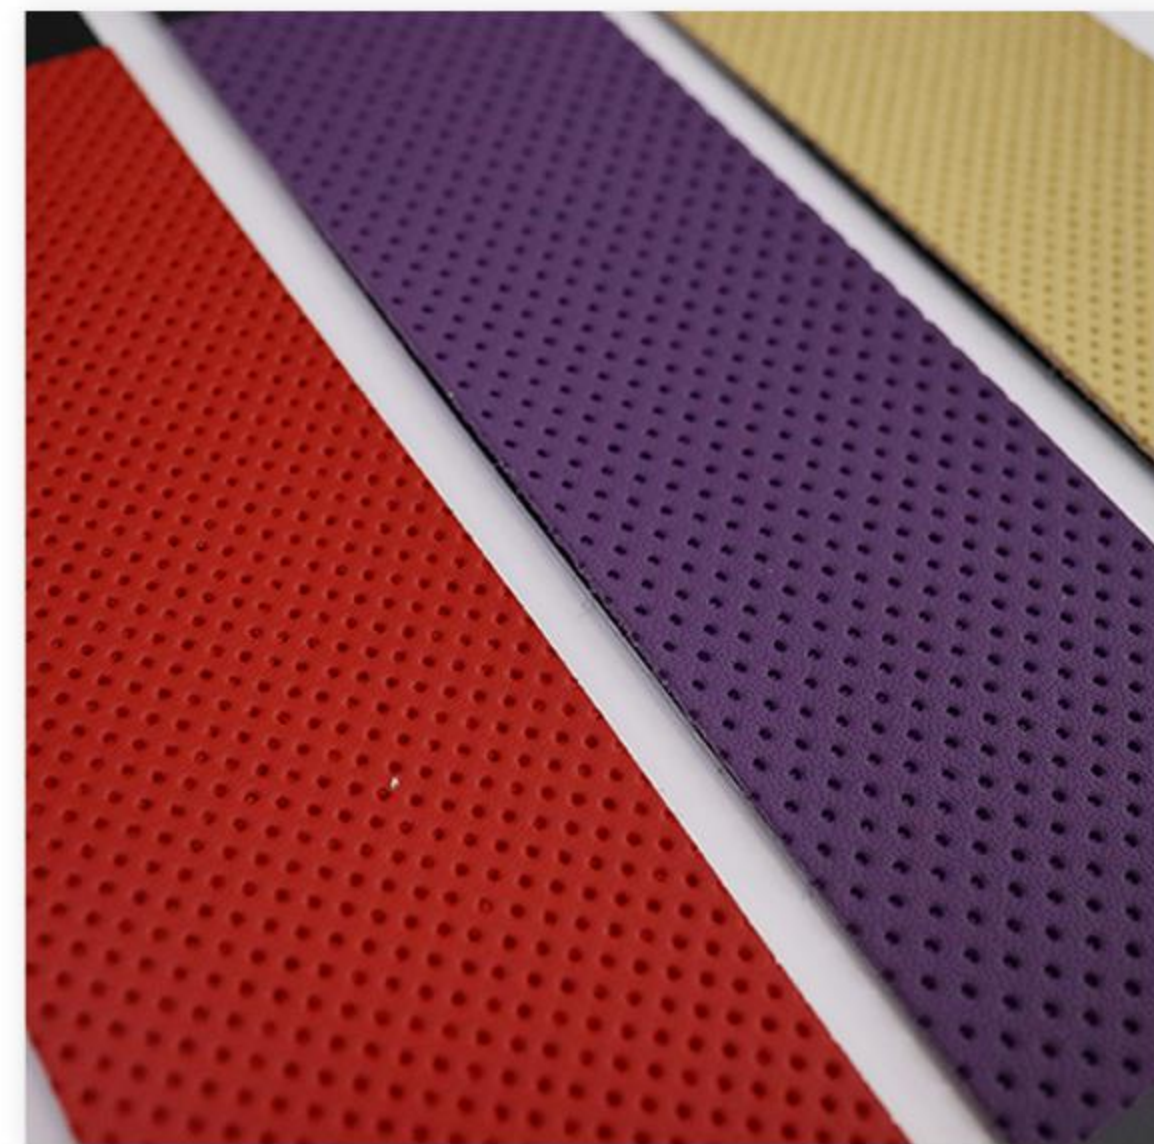

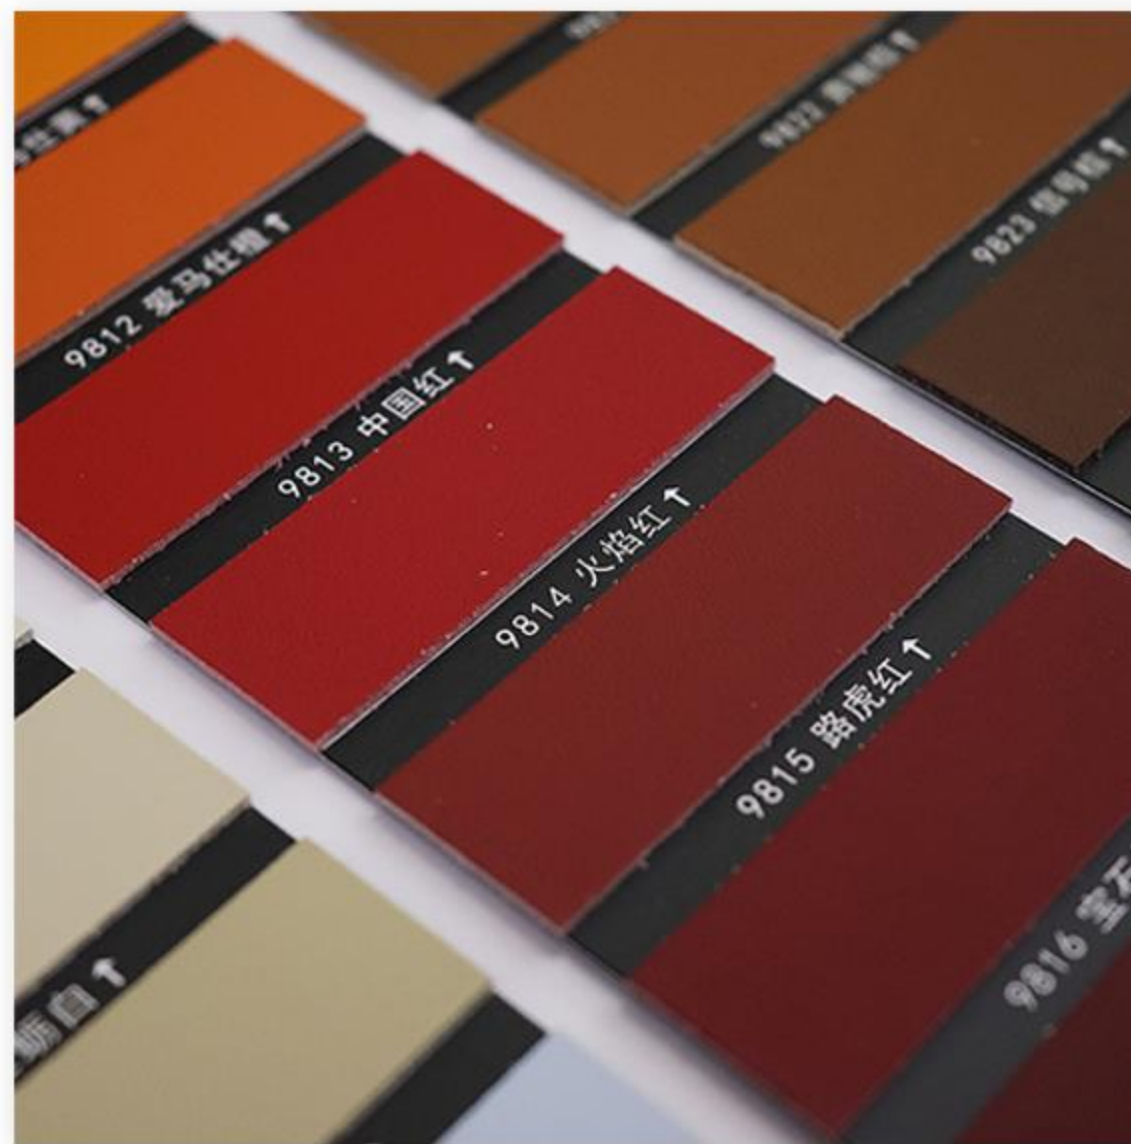

6,waterproof,anti-pollution ability.

7.long service life,up to 8-10 vears.

PU microfiber leather is divided into oiy-borne and water-bome mateid

Water-borne microfber leather is mostly used in home sofa, bed, cabinet coating, scratch-resistant, en-vironmental protectionand odorless.0 armor, 0 toluene.leather texture.

Microfiber Suede leather

Microfiber suede leather is now a more popular microfiber in the microfiber classification, The main characteristics are his high softness, light quality, good sense of velvet, comfortable feel, by the shoe materials and furniture and other industries love

Microfiber suede leather is a kind of high and new technology simulation leather product. It can be divided into two kinds: fixed and indefinite island. Compared with the fixed island microfiber, it will have a more stable performance, and the color fastness will be much higher. More suitable for the application field of quality requirements.

Microfiber suede leather is one of the most popular types in the microfiber classification nowadays. Because of the high softness, light quality and other characteristics, by the shoe materials and furniture and other industries love

Microfiber suede leather can be made with single-sided or two-sided. Single-sided velvet refers to the microfiber velvet for single layer use, suitable for shoes and home decoration industry. Two-sided velvet is double-sided use, suitable for clothing and bag decoration.
